

PeopleSoft Update Manager

This PeopleSoft Update Manager training covers all of the tasks required to set up and use PeopleSoft Update Manager methodology for applying update maintenance to your PeopleSoft 9.2 and above applications. You'll learn how to perform each task from installing the PeopleSoft Image to applying the updates to all your PeopleSoft environments, as well as upgrading PeopleTools, and applying PeopleTools patches.

Updated for PeopleTools 8.57; Suitable for students using PeopleTools 8.54 or later.

Learn To:

- Download and deploy PeopleSoft Image (PI).
- Configure the Windows Client running Change Assistant.
- Upload customer data and target database to PI.
- Use PeopleSoft Update Manager PIA application.
- Apply Change Packages.
- Use Change Assistant for Update Manager, which includes defining and applying the generated custom change package.
- Download and apply a PeopleSoft Release Patchset.
- Upgrade PeopleTools and apply PeopleTools patch.
- Create or modify a change package.

Benefits to You

PeopleSoft Update Manager is the update methodology and mechanism you will use to apply updates to your PeopleSoft applications. This course steps you through the entire process to get you up and running quickly, while developing the skills to perform all of the tasks necessary to set up and use this methodology. Learn through participating in hands-on exercises.

PeopleSoft Image

You'll also learn to download, import and start the PeopleSoft Image for your PeopleSoft product.
